

IONA Rectangular Dining table

Assembly instructions

Basic  30-40
Minutes

Parts

Hardware

Item A - 2 x Threaded rod (60cm)

Item B - 2 x Rod connector nut

Item C - 2 x Threaded rod (13.5cm)

Item E - 2 x Locking nut

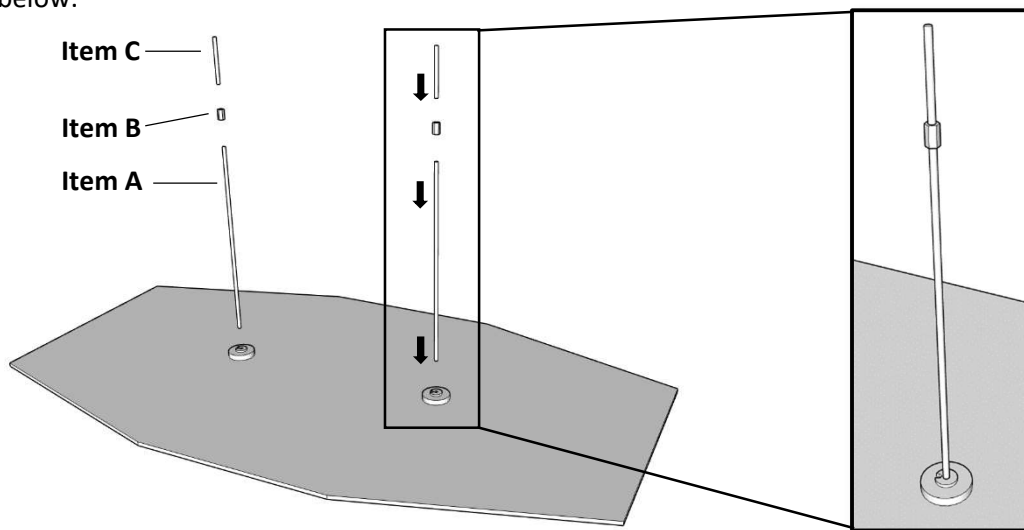

Item F - 1 x Spanner (Tube shaped)

Assembly Stages

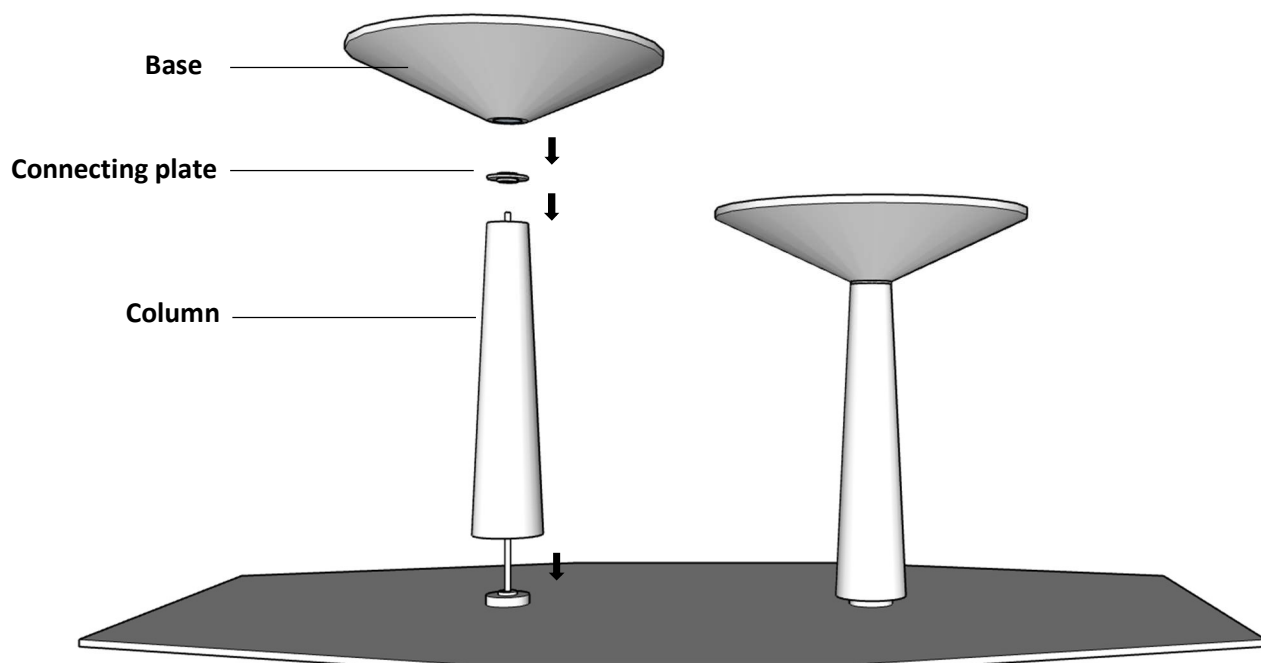

Stage 1 – Fit the Threaded rods

Lay the top down so the fixtures are facing up. Screw **Items A, B and C** together and into the fixture like diagrammed below.

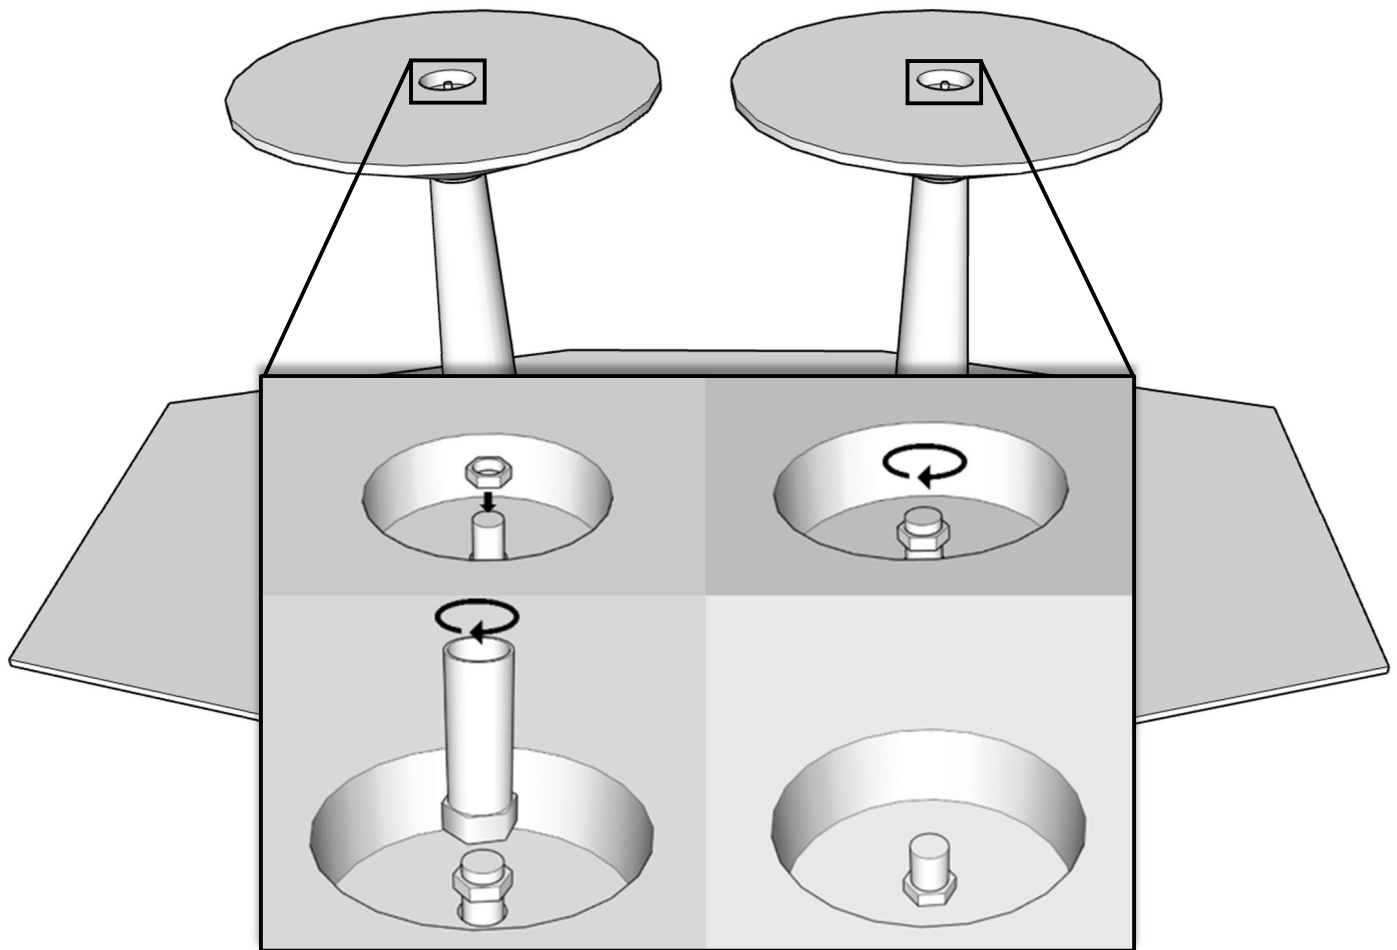

Stage 2 - Slide the components over the threaded rod

Once the threaded rods have been connected and screwed in, proceed to slide the components over the rods like diagrammed below. Make sure the Locking teeth drop into their relevant slots.

Stage 3 – Locking the components together

Once all the components have dropped into place and locking teeth are aligned you can now use the **locking nut (ITEM E)** and **Spanner (ITEM F)** to tighten them all together.

Stage 4 – Flip the table

You will need a minimum of two people for this step. We don't suggest that you pivot the table on the edge of the glass but if you do make sure the surface is soft/cushioned otherwise you could damage the glass. **If you have the concrete base variant, we suggest an extra person to support the weight of the bases when flipping.**
